MICHELL'S SUPERB DARWIN TULIPS

The lovely form, exquisite coloring, and the enormous size of the Darwins make them the favorites among Tulips. They belong to the May-flowering or late-blooming class and produce their gigantic flower cups on long, stiff stems, above the broad foliage. Darwin Tulips are ideal for the herbaceous border or massed in clumps in front of shrubbery, and as a cut-flower for vases they are superior to any other class. They are also excellent for pan- or pot-culture. As this class is short of yellow, orange, and bronze varieties, these colors may be obtained in the Breeder and May-flowering or Cottage types; the flowers are similar in shape and bloom at the same time as the Darwins. Ideal arrangements and color effects can be obtained by a combination planting as suggested above.

CULTURAL DIRECTIONS.—For Bedding Out. Plant in October or November, in good, well-drained garden soil, setting the bulbs 5 to 6 inches apart and 4 to 5 inches deep. After the ground has frozen, cover with litter, leaves, or manure to protect them from frost; this should be removed in the spring when danger from hard frost is past.

For Pot- or Pan-Culture. Plant 4 to 6 bulbs in a 6-inch pot or pan, water thoroughly, and then remove to the open ground or a coldframe, covering with coal-ashes. After they have rooted thoroughly, they should be brought in a moderately cool room and gradually to a warmer one. By bringing in a fresh supply every 10 days they can be had in bloom all winter.

For complete cultural notes, see "Michell's Bulb-Growing Guide," sent free on request.

The asterisk (*) preceding the variety denotes that it is suitable for forcing as well as bedding. The letters E, F, and G following the variety indicate their relative time of blooming, the E's being the earliest to bloom. The figures indicate the normal height in inches.

If Tulip bulbs are wanted by Parcel Post, add 25c. per 100 for postage to the first and second zones; for other zones, please see Parcel Post table on page 1

MICHELL'S DUTCH BREEDER TULIPS

See color illustration on insert

Similar to the Darwins in their tall, strong growth, and flowering at the same time. They produce immense blooms on long, stiff stems, and in some instances are larger than the Darwins. Their artistic colors make them great favorites with those who desire to contrast their bronze, terra-cotta, and buff shadings with the lighter-colored sorts of the Darwins. They make a fine effect in hardy borders, and when used as a cut-flower last a long while in water.

The asterisk (*) preceding the name of the variety denotes that it is suitable for forcing as well as bedding. The letters F and G following the name indicate their relative time of flowering, the F's being the earliest to bloom. Figures indicate the normal height in inches.

MICHELL'S SINGLE EARLY TULIPS

The Single Early Tulips are far more valuable for the garden than is generally accepted, blooming so much earlier than the Darwins and at a time when daffodils are at their best. Excellent effects can be produced if used in the border; they make their best showing when little else is in bloom. The earliest of all Tulips to bloom when forced.

The asterisk (*) preceding the name of a variety denotes that it is suitable for forcing as well as bedding. The letters A, B, and C following the name indicate their relative earliness to bloom, the A's being the earliest, followed by the B's and later by the C's. Figures indicate the normal height in inches.

MICHELL'S SUPERB NAMED HYACINTHS

Our Hyacinth bulbs are of best quality, grown by specialists especially for us. The bulbs are of maximum sizes, fully aged.

CULTURAL DIRECTIONS FOR HYACINTHS: Outdoor Culture.—Plant in October and November, in good, well-drained garden soil. Plant bulbs so that the top will be 3 to 4 inches below the surface and 6 to 8 inches apart. After the ground has frozen, cover with litter, leaves, or manure, to protect them from frost; this should be removed in the spring when danger from hard frost is past.

Pot-Culture.—Plant any time from September to December, using a 4- or 5-inch pot for single bulbs, or several bulbs may be planted in a larger pot or bulb-pan. After planting, water well and put in a cool, dark, airy place until well rooted, after which remove to a cool room and later to a warmer room.

Culture in Glasses.—The single varieties are the best for this purpose. Place the bulb in a glass, which should be filled with water, so it touches the bottom of the bulb, and put the glasses in a cool, dark place. Change the water occasionally. Keep in the dark until well rooted and then remove to a light, cool place.

For complete cultural notes, see "Michell's Bulb Growing Guide," sent free on request.

As there is a slight variation as to time of blooming of the various sorts, we have indicated their relative time of flowering by letters following the name of the variety, the A's being the earliest, the D's the latest.

Roman Hyacinth, Virginia

BLUE ROMAN HYACINTH VIRGINIA

This Hyacinth, which has been successfully grown for the last few years, comes from France. It is a cross between the Dutch Hyacinth, Captain Boynton, which is one of the finest of porcelain-blues and one of the strongest growers and the White French Hyacinth, from which it receives its daintiness and earliness of bloom. Virginia has much larger bells and the stem is longer than the White Roman. It will produce two or three perfect flower-spikes to the bulb. These do not appear together, but are successive in their bloom, thereby supplying flowers from the same planting over a long period of time.

Virginia will bloom for Christmas, coming at a time when flowers are scarcest in the green-houses. If not required at that time, it may be grown cool and flowered when wanted. It is impossible to describe or say too much about this Hyacinth. We feel it is really one of the finest introductions in recent years.

FRENCH ROMAN HYACINTHS

French Roman Hyacinths afford a continuous supply of bloom from early winter until late in spring if planted in succession. They are very fragrant.

Easily grown in pots or pans, and if bulbs are potted in September, the pots plunged in the open ground for a month, until well rooted, and then brought in the house, they can be had in flower in November or December, and a continuous supply of flowers may be had by bringing in a few pots or pans at intervals of about 2 weeks. The bulbs should be planted quite close together; a 6-inch pot or pan will be sufficiently large for six bulbs. They are not hardy and are not suitable for outdoor planting.

A bed of Emperor Narcissus

MICHELL'S NARCISSUS OR DAFFODILS

AMERICAN-GROWN

No garden is complete without the Narcissus or Daffodil, it being among the most beautiful and fragrant of our hardy spring-flowering bulbs, doing well in almost all soils and situations, for naturalizing, planting among shrubbery, and in formal beds. For house or greenhouse culture they are equally desirable, planted in pots or pans.

Cultural Directions.—Owing to the various sizes of the bulbs of different varieties, we cannot give the exact depth to plant, but a good rule to follow is to cover the bulb one and one-half times its own depth. For house-culture, 3 or 4 bulbs can be put in a 5-inch or 6-inch pan or pot and given the same treatment as hyacinths.

The letter following the name indicates their relative time of flowering, the A's being the earliest to bloom, followed by B's, and the C's the latest. The figures denote the height in inches.

If Narcissus bulbs are wanted by Parcel Post, add 30c. per 100 for postage to the first and second zones; for other zones, please see Parcel Post table on page 1

POLYANTHUS NARCISSUS

Bunch-flowering

This class of Narcissus is suitable for indoor planting only, except south of the Carolinas. We list the best three varieties of this type, which are grown especially for us, and the bulbs we have been supplying have been giving the best results. These bulbs can be grown successfully in soil as well as in pebbles and water, and can be had in bloom from Thanksgiving to Easter. Store your bulbs in a cool, dry place when received, and for a succession of bloom, plant at intervals of about two weeks from October 1 to March 1.

The flowers are produced in clusters and are delightfully fragrant.

MICHELL'S EASTER LILY BULBS

For indoor culture

Cultural Notes.—As soon as bulbs are received, plant them in pots. Place a handful of well-rotted cow-manure in the bottom of the pot and set the bulb directly on top, covering it with soil. After watering, place in an outside pit and protect from the direct rays of the sun; cover well with soil, ashes, or any other suitable litter. After the bulbs have become thoroughly rooted, bring inside, in a temperature of about 60 degrees. Let the plants grow slowly under a bench or some other suitable place until about 6 inches high, then place on top of the bench. About two months before Easter they can be brought into a warmer temperature and gradually forced into flower and height at one time.

One of the earliest flowers to bloom in spring. Most effective for borders or beds, also for planting in clumps among shrubbery and for the rock-garden. In lawns, planted in the grass, the Crocus are extremely attractive. An effective method of planting is to scatter them over the lawn by digging up a small piece of sod here and there and placing one or two bulbs in each spot. This gives a very pretty effect. The Giant-flowering varieties are also fine for flowering in pots, but too severe forcing must not be attempted. Height, 6 in.

Michell's Giant Pansies

Seed may be sown any time in the autumn—the earlier the better—for early blooming the following spring.

Zvolanek's Giant Climbing Pansy. After many years of painstaking work, Mr. Zvolanek has succeeded in producing this magnificent strain of Tree Pansy, which we consider the finest of its type. The plants grow to a height of 3 feet and produce immense blooms on stems 16 to 18 inches long. The colors are a pleasing blend of light and dark shades. This strain is very free flowering, making this ideal for winter forcing. We offer the originator's strictly new-crop seed. Pkt., \$2.50.

Shakespeare's. These are the simple, quaint, little Pansies of Shakespeare's time, and are suitable for any location in the garden. They can be very easily grown wherever Pansies are successful and are most ideal for the old-fashioned garden, the rock-garden, or that shady location in the border. The habit of growth is similar to Violas, and they flower continually throughout the season. The flowers range through purples, yellows, blues, and whites, and are delightfully fragrant. Pkt., 25c.; \$1.00 per large pkt.; 1/8 oz., \$2.00.

Michell's Springtime. This is a fine new early-flowering variety, with blooms measuring 3 1/2 to 4 inches across. The plants are of dwarf habit and commence to bloom very early in the spring. The mixture contains all the bright shades that are so popular in the spring garden. Pkt., 25c.; 75c. per large pkt.; 1/8 oz., \$1.50.

America. A very selected, dwarf, free-flowering strain in a fine mixture of popular shades. American-grown seed. Pkt., 50c.; \$1.25 per large pkt.

Michell's Hardy Perennial Plants

These old-fashioned hardy flowers are the garden favorites, and justly so, for there is no time during the entire flowering season when some variety is not in bloom. They are particularly valuable in late summer and autumn when there are few shrubs in bloom. Beginning in early April they provide a constantly varying pageant of color throughout the summer and until stopped by severe frosts. They appear regularly, year after year, and as each variety has a fixed time for blooming, careful selection will insure flowers for cutting from early spring to late fall.

The Hardy Perennials are most satisfactory when planted in a border, in front of a hedge, fence, or wall, or in the open garden. When planting,

the soil should be dug to a depth of 1½ to 2 feet, pulverizing it thoroughly and working in a liberal amount of well-rotted stable manure or other fertilizer. Place in groups of three or more plants of one variety, the taller-growing ones at the back, the medium-high ones in the center, and the dwarf varieties at the front. It is important, too, that the plants are so placed that there will be some flowers in all parts of the border at all times. This can easily be accomplished by consulting our descriptions for time of flowering. Our book, "The Hardy Flower Garden," is an instructive publication which can be had free on request. We offer only such varieties as can be planted in autumn.

Special Notice on Guarantee. We spare no effort to supply plants of the best quality in first-class living condition. On account of the many causes beyond our control we cannot guarantee this stock to live and establish itself, as that is usually entirely within the power of the buyer or planter.

Grandiflora. Dark brown center, surrounded with a rich orange disc; petals on outer edges yellow. 30c. each; 3 for 85c.; \$3.00 per doz.; 25 for \$5.50.

Three New Gaillardias

Mr. Sherbrook. The full, circular flowers are of rich golden yellow with a pale yellow center, unstained by any other color. The large flowers, supported by stout stems above the pale green foliage, continue from early summer until late in the fall. In common with every *Gaillardia grandiflora*, it is so unmindful of the hardships of heat, dryness, and poor soil that it is hard to imagine anyone having difficulty with it as long as it receives its share of sunlight.

Ruby. This is a brilliant red with no trace of yellow or brown in its make-up. Blooming all summer, as do few other perennials, the vivid flowers make a continuous showing and furnish abundant cut-flowers as well. The plants we offer are all grown from cuttings, which insures true color in every flower.

Sun God. The outstanding Gaillardia. Pure golden yellow throughout, free from marking of any kind. The flower is very large, almost 4 inches across, with broad, overlapping petals. Clean-cut, wiry stems often 2 feet or more in length. A free-flowering, handsome garden plant and an excellent cut-flower.

Any of the above, 50c. each; 3 for \$1.35; \$5.00 per doz.; 25 for \$9.00

We offer these in separate colors: Pink, Red, and White. 35c. each; 3 for \$1.00; \$3.50 per doz.; 25 for \$6.50.

Hollyhocks

These thrive best in soil that is not too wet and which should be enriched with well-rotted stable or sheep-manure. While perfectly hardy, they should be protected slightly during the winter with leaves, long manure, or straw. To guard against fungus or rust, we recommend spraying the plants in early spring with Pyrox or Bordeaux Mixture.

DOUBLE. Our strain of these is very fine, and we offer them in separate colors, double-flowering only: Yellow, Crimson, Pink, and White.

Early Triumph. An excellent type of branching habit, 4 to 5 feet high and flowering 10 days earlier than the regular type. Mixed colors only.

The old-fashioned "Piney" is yet one grand garden flower

Michell's Giant-flowering Peonies

These are the most popular June flowers, next to roses, and justly so, for they lend themselves to almost any style of planting, while, for the little care required, they give a variety of color and wealth of bloom unequalled by any other plant. Their requirements are few; they will succeed in any good garden soil in an open, sunny position. Care should be taken, however, to keep all fresh manure away from the roots—if barnyard manure is used it must be thoroughly decomposed; if you are unable to procure this, bonemeal makes a good fertilizer. Peonies may be planted any time after September 1 until the ground freezes in the autumn, and in the early spring until the season is too far advanced. The best time, however, is during September and October, as they make roots during the moist, cool weather of autumn and consequently carry through the winter in better shape. The roots should be set so that the top or upper eyes are about 2 or not more than 3 inches below the level of the soil; do not set the roots flat, but stand them up. For the best

results, Peonies should be planted from 3 to 4 feet apart each way, according to the space at your disposal; the ground around them should be well cultivated at all times, and in the spring, after growth starts, they should have an abundance of water if the season is at all dry. When cutting the flowers, always leave one or two bottom leaves; it is best to leave a few flowers on the plant also, as it is of vital importance that sufficient foliage be left to develop the eyes under the ground for next season's growth. Newly planted roots may not develop a characteristic flower the first season; in fact, it is usually not until the third year that perfect flowers, true to description, will be produced. Peonies are seldom troubled with any disease or insect pests. Ants sometimes appear on the buds, coming to gather a sweet gum which the bud exudes while developing; but they will do no harm, disappearing when the flower opens.

Michell's Dormant Field-Grown Hybrid Tea Roses FOR FALL PLANTING

Any of the following Hybrid Tea Roses, 75c. each; per doz., \$7.50

Spring planting was formerly the rule, but now many of the most successful Rose-growers prefer to plant their Roses in the autumn, claiming that they have more success. Plants shipped in the dormant state take up very little room and may be safely shipped by Parcel Post.

If there is danger of the ground freezing before the arrival of the plants, protect the space where you wish to plant them by a covering of leaves or other loose litter. Plant as soon as they arrive, covering the bud with

at least one inch of soil. Mound the earth about 12 inches high around the base of the plants, thus covering the buds on the lower ends of the branches, which protects them from alternate freezing and thawing, so injurious to Rose bushes. Early in spring, before growth starts, but after danger of severe frost is over, remove this covering of earth and prune the plants.

Autumn. Novel and distinct in coloring—burnt-orange, streaked with red. Close, compact growth.

Briarcliff. A popular florists' Rose that has more than made good in the garden. Its size, form, color, stem, and foliage leave nothing to be desired. Large, glowing rose-pink blooms with delightful fragrance.

Charles P. Kilham. Brilliant orange-red blooms, suffused with scarlet, large, beautifully shaped, and slightly fragrant. Vigorous, upright grower, continuous bloomer, with healthy foliage.

THE NEW DAWN

The Everblooming Dr. W. Van Fleet

Plant Patent No. 1

This new Climber is like its parent, Dr. W. Van Fleet, in all respects, except that it blooms all season. It has the same long-pointed, flesh-pink buds and double flowers, glossy, healthy foliage, and vigorous growth that have made Van Fleet the Rose pre-eminent in its color and class. Strong, 2-year plants, \$1.50 each.

HARDY CLIMBING AND RAMBLER ROSES, continued

Emily Gray. Shining, holly-like foliage and fragrant, unfading golden buff blooms make this an exceptionally attractive Climber. Its deep saffron-yellow buds add to its loveliness. Needs winter protection.

Jacotte. One of the best of the so-called yellow Ramblers. It has glossy, holly-like foliage and large, semi-double, brilliant apricot-orange flowers, fading lighter. Vigorous.

Mary Lovett. A favorite white climbing Rose, producing an abundance of its waxy white blooms on long, strong stems. Foliage very attractive.

White Dorothy. A pure white sport of Dorothy Perkins with all its fine characteristics. Makes a lovely display in the blooming season.

Rosa Hugonis, Golden Rose of China

In late April or early May this Rose provides one of the most beautiful sights in the garden. Every branch of the previous year's growth is closely set on both sides to the very tip with exquisitely beautiful, single, clear pale yellow flowers. The long, arching branches make Hugonis not only a beautiful shrub to plant with other shrubs if desired, but when cut are charming table decorations. It is ruggedly hardy everywhere in America, needing neither protection nor pruning, except to cut out the older shoots. Do not plant it among bush Roses, as it is too vigorous a grower to fit in such a planting. 75c. each.

The fruit, which is dark purple at first becoming black when fully ripe, is of blackberry form with berries averaging 1½ inches long, with occasional fruit an inch longer. Latham. The finest red Raspberry to date. More productive than any other variety. The berries are very large, bright red, and of wonderful flavor.

Pot-Grown Strawberry Plants

TWO NEW EARLY STRAWBERRIES

These two new varieties were developed by scientists in the U. S. Department of Agriculture and were selected from thousands of seedlings as being outstanding in quality, vigor, productivity, size, and appearance.

Dorsett. The berries average very large, are firm and rather light in color, while the flavor leaves nothing to be desired. They are beautiful in appearance, the light color, bright green cap, large size, and attractive shape making them very desirable. They should appeal to every grower of Strawberries.

Fairfax. Picked at the proper time, Fairfax berries average very large and firm, are bright red with a light green cap; as they become riper they get darker and then very dark red. They maintain their firmness and flavor even after they become very dark.

Price, pot-grown plants, \$1.25 per doz.; per 100, \$8.00; \$75.00 per 1000
 Price, layer plants, 25 for \$1.00; \$1.50 for 50; per 100, \$2.50; \$15.00 per 1000

Fall-fruiting Variety

- Mastodon Everbearing Wonder.** This is, unquestionably, the most prolific of everbearing varieties. Bears continuously from June till frost, the late fruits being as large as those of the early crop. Berries are of excellent quality. Plants should be grown in single hills, as it does not do so well in matted rows.

MICHELL'S RELIABLE GRASS MIXTURES

Concerning Fall Seeding

The cool, moist weather of late summer and early fall affords an ideal condition for rebuilding a lawn that has suffered from drought, neglect, or the ravages of weeds. Seed sown at this time will show quicker growth and has a tendency to stool or spread out, a condition not present during the warmer months. Competition with weeds is practically eliminated at this season, since the latter are incapable of germination until spring, by which time fall-sown grass is thoroughly established and the weeds have little chance to thrive. Seed may be sown successfully as late as October 15 in the latitude of Philadelphia, but we would recommend the month of September for best results.

Quantity to Sow for Lawns. We recommend sowing 1 quart to 100 square feet; 1 peck to 1000 square feet; 1 bushel to 4000 square feet; 6 to 8 bushels per acre on new ground without grass. In renovating established lawns, use half the above quantities.

Send for our booklet "Lawn Pointers" for further suggestions on the care of your lawn.

MICHELL'S TOP-NOTCH LAWN SEED

A perfectly blended combination of the purest seed most suitable for the establishment of a luxurious lawn. This formula combines the qualities of quick growth, compactness, and permanence, and is recommended to those who seek the ultimate in a lawn mixture. 25 lbs. per bus. \$3.75 per pk.; $\frac{1}{2}$ bus., \$7.00; \$13.50 per bus.; 100 lbs., \$50.00.

MICHELL'S CLOVER LAWN SEED

The increasing demand for a grass seed mixture containing a larger proportion of White Lawn Clover induced us to offer this brand; mixed with a liberal quantity of the best re-cleaned White Clover, which is particularly suited to take firm hold and grow quickly on hard or worn-out spots which sunburn easily. Splendid for seashore lawns. 30 lbs. per bus. 35c. per pt.; qt., 65c.; \$1.25 for 2 qts.; 4 qts., \$2.25; \$4.25 per pk.; $\frac{1}{2}$ bus., \$8.25; \$16.00 per bus.; 100 lbs., \$50.00.

MICHELL'S GREEN VELVET LAWN SEED

Where a closely knit turf of lustrous green, velvety appearance is desired, we suggest this combination. It is a perfectly hardy mixture, ideally suited for fine permanent lawns. 20 lbs. per bus. 25c. per pt.; qt., 45c.; 85c. for 2 qts.; 4 qts., \$1.50; \$2.75 per pk.; $\frac{1}{2}$ bus., \$5.25; \$10.00 per bus.; 100 lbs., \$46.00.

MICHELL'S SHADED LAWN SEED

Shaded areas are often difficult to keep in grass. We have combined several shade-tolerant varieties of grass seed in a mixture that is capable of producing perfect turf in the most densely shaded place. It should be remembered that such spots, particularly under trees, are generally deficient in plant-food and moisture, and these conditions should be remedied for good results. 20 lbs. per bus. 30c. per pt.; qt., 55c.; 95c. for 2 qts.; 4 qts., \$1.75; \$3.00 per pk.; $\frac{1}{2}$ bus., \$5.75; \$11.00 per bus.; 100 lbs., \$50.00.

Recommended to fill the requirements of the average lawn, this mixture will produce a very desirable turf of fine-bladed, hardy grasses, capable of withstanding considerable wear and periodic dry spells. 20 lbs. per bus. 20c. per pt.; qt., 35c.; 65c. for 2 qts.; 4 qts., \$1.25; \$2.25 per pk.; $\frac{1}{2}$ bus., \$4.00; \$7.50 per bus.; 100 lbs., \$35.00.

Alfalfa. (Grimm Strain.) An extremely hardy variety, less apt to winter-kill than older sorts. A heavy yielder and of deep-rooting habit. It requires about 15 to 20 pounds to properly seed an acre. 70c. per lb. (by Parcel Post, 80c.).

Alsike or Swedish Clover (*Trifolium hybridum*). One of the best for mixing with timothy; grows from 1 to 2 feet high. Sow early in the spring or late summer and early autumn, 10 to 15 pounds per acre alone or 8 pounds per acre with timothy. 50c. per lb. (by Parcel Post, 60c.).

Crimson Clover (*Trifolium incarnatum*). Used principally for soiling or green manuring. It is not hardy for more than one season and must be sown each year. Height 1 to 2 ft. Sow any time from April to October, 20 pounds to the acre. 25c. per lb. (by Parcel Post, 35c.).

Red Clover, Medium (*Trifolium pratense*). Central States origin. Used principally for hay purposes. Sow early in the spring or in late summer—July and August; if alone, 20 pounds per acre; if with other crops, 10 pounds per acre. 50c. per lb. (by Parcel Post, 60c.).

Mammoth Red Clover (*Trifolium pratense perenne*). This differs from the Medium; being of a ranker growth and yielding more fodder per acre. Sow early in spring or in July and August, using 20 pounds per acre alone, or with other crops, 10 pounds per acre. 55c. per lb. (by Parcel Post, 65c.).

Michell's Choice Re-cleaned Seed Wheat

Weight of Seed Wheat, 60 pounds per bushel.

FORWARD (Beardless). This variety has gained rapidly in popularity. It has wonderful stooling properties, a single grain having been known to produce as high as fourteen stalks. Forward is a heavy yielder, 55 bushels per acre having been recorded. A very hardy variety, straw very thick-walled, of good length, and bears up its heavy load of grain well. This variety is well liked by millers, the grain being of a dark color and of hard texture. Medium early in ripening. Sow $1\frac{1}{2}$ to 2 bushels per acre. 20c. per qt. (by Parcel Post, 30c.).

LEAP'S PROLIFIC (Beardless). A most prolific variety indeed and may be relied on to give big crops. It stools out strongly and roots deeply. The grain is large, dark red, and of the best milling quality. Heads are large, with beautiful white chaff and without beards. It is one of the earliest to ripen and we recommend it as an all-round good variety. Sow $1\frac{1}{2}$ bushels per acre. 20c. per qt. (by Parcel Post, 30c.).

PENNSYLVANIA 44 (Bearded). A variety originating at the Pennsylvania State Agricultural Experiment Station and developed from the Fulcaster. Grains red; purple straw; white chaff. It is a few inches taller than Fulcaster, and with stiffer straw. This variety has yielded an average of 35 bushels per acre. Sow $1\frac{1}{2}$ to 2 bushels per acre. 20c. per qt. (by Parcel Post, 30c.).

RAPE

Dwarf Essex. An excellent green food for sheep and hogs; can be pastured 8 weeks after sowing. Sow 6 pounds per acre broadcast or in drills until October 1. It produces enormous crops and is ideal green manure. Weight, 50 lbs. per bus. 15c. per lb. (by Parcel Post, 25c.).

WINTER RYE

This makes a fine winter cover crop, usually being sown in the autumn. Winter Rye will not mature if sown in spring. Weight, 56 lbs. per bus. Sow $1\frac{1}{2}$ bushels per acre.

Rosen. An improved variety of exceptionally heavy yield, with long straw and well-filled heads. We offer only the choicest Michigan-grown seed. 15c. per qt. (by Parcel Post, 25c.).

WINTER VETCH

Vicia villosa

Sometimes called Sand or Hairy Vetch. Our stock of this is the true type, which will absolutely live throughout the winter. Sow broadcast from August 1 to October 1, the earlier the better, 1 bushel per acre, to which we suggest adding a bushel of winter rye or wheat. In the spring it can be plowed under as green manure, or, when in flower, cut for hay. All stock relish it keenly. Seed should be inoculated with Legume-Aid before planting. Weight, 60 lbs. per bus. 25c. per lb. (by Parcel Post, 35c.).

TIMOTHY

For sowing with wheat as a second-year hay-crop, or for sowing alone for a first-year hay-crop, this is extensively used. We handle only seed of the purest and highest germinating quality. Weight, 45 lbs. per bus. 15c. per lb. (by Parcel Post, 25c.); 10 lbs., 80c.

LEGUME-AID

A moist composition base. Living bacteria in a base of relative low-moisture content which adheres to dry seed without the use of water.

For Alfalfa and all Clovers: $\frac{1}{4}$ -bus. size 20c.; 30c. per $\frac{1}{2}$ -bus. size; 1-bus. size 50c.; \$1.00 per $2\frac{1}{2}$ -bus. size.

WHEAT FERTILIZER

MICHELL'S *Green Velvet Lawn Seed*

Here is a lawn grass seed that we strongly recommend for trial on lawns where other mixtures have not proved up to expectations.

It was prepared to produce a perfectly hardy, closely knit turf for general purposes, and has more than made good wherever tried.

The turf produced is velvety in texture, just about as lustrous a green as one could wish for, and, best of all, it succeeds under a wide range of conditions.

The modern Dutch Hyacinth is not only a glorious flower to look at, but its fragrance is something to remember. For garden use these can be planted in solid beds of one color, or mixed colors if so desired, or scattered in groups of 15 to 25 bulbs of a kind in front of, or between, shrubs or evergreens. White or light blue Hyacinths, blooming with an evergreen background, make a beautiful garden picture. We have an especially selected lot of bulbs this year and hope that our customers will take advantage of this opportunity of securing some extra-fine Hyacinths. See page 8.
